

surface of the blanket, the product having a densified perimeter flange, the flange providing stiffness to the product, and the flange being capable of being held in place on the vehicle by an attachment system; said blanket of polymer fibers including primary fibers and bi-component polymer binder fibers that are made of a principal polymer component and a binder polymer component, the binder component having a softening point lower than the softening point of the principal component, and the binder component having been heated to a temperature that is insufficient to soften the principal component but sufficient to soften the binder component to bond the multi-component polymer binder fibers and the primary fibers to themselves and to each other.

11. (Amended) The acoustical insulation product of claim 1 in which the primary fibers are polyethylene terephthalate fibers and in which the bicomponent binder fibers include a core of polyethylene terephthalate and a sheath of polyethylene terephthalate.

15. (Amended) An acoustical insulation product for a vehicle comprising a blanket of polymer fibers and a water resistant facing material adhere to a major surface of the blanket, the product being capable of being held in place on the vehicle by an attachment system; said blanket of polymer fibers including primary fibers and bi-component polymer binder fibers that are made of a principal polymer component and a binder polymer component, the binder component having a softening point lower than the softening point of the principal component, and the binder component having been heated to a temperature that is insufficient to soften the principal component but sufficient to soften the binder component to bond the multi-component polymer binder fibers and the primary fibers to
